9. Experiment: AI-Assisted Features & Zia Analytics in Zoho Creator

> **Aim:** To explore and configure built-in artificial intelligence capabilities (Zia) and advanced analytics features within Zoho Creator for intelligent data querying, predictive occupancy forecasting, and automated revenue insights in a Hotel Room Booking application.

OVERVIEW

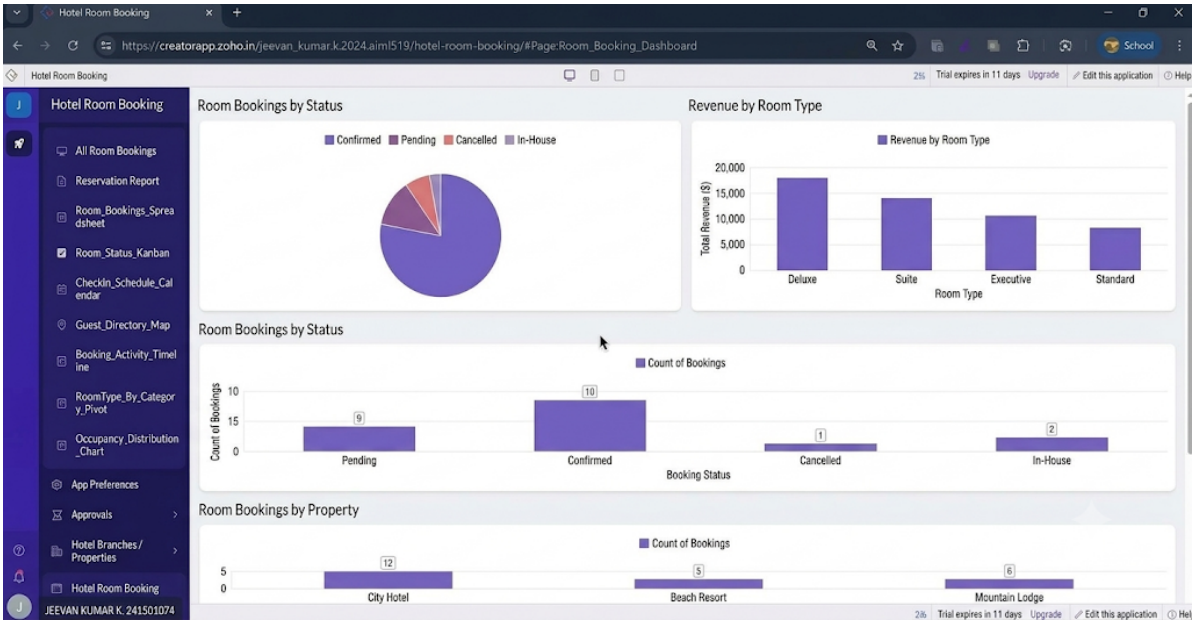

Zoho Creator integrates Zia (Zoho's conversational AI and analytics assistant) to empower low-code developers with natural language processing, automated chart creation, occupancy anomaly detection, and predictive booking analytics.

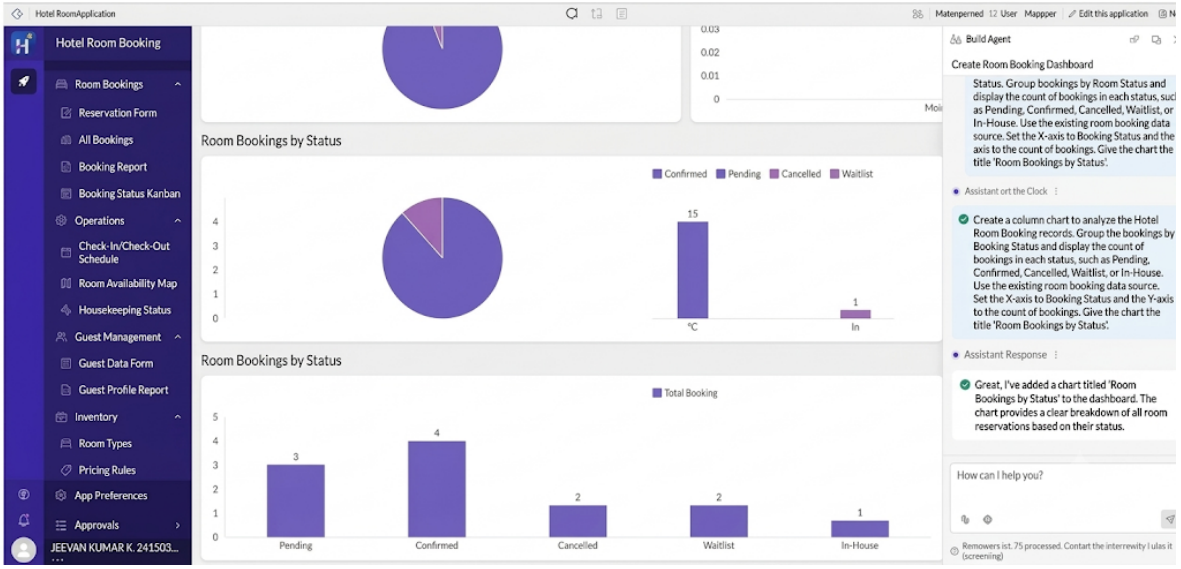

Feature / Capability	Functional Description in Zoho Creator
Zia Voice & Chat	Allows hotel managers to query reservation data, check room availability, and trigger revenue reports via conversational commands.
Smart Analytics	Automatically suggests key operational metrics, room distribution pivot tables, and visual charts based on seasonal booking patterns.
Anomaly Detection	Flags unusual booking cancellations, unexpected spikes in room discounts, or operational delays using machine learning algorithms.

PROCEDURE

1. **Enable Analytics & Zia:** Open your Zoho Creator application workspace, navigate to the **Analytics** module, and ensure Zia AI assistant integration is active for your target data tables (e.g., *Room Bookings*, *Guest Profiles*, and *Payments*).
2. **Generating AI-Driven Dashboards:** Use the natural language query prompt box to type commands like *"Create a bar chart to analyze the Hotel Room Booking records. Group the bookings by Booking Status and display the count of bookings in each status"* or select Zia's automated dashboard recommendations.
3. **Configuring Predictors & Insights:** Set up data prediction models to forecast future occupancy trends and seasonal room revenue based on historical application records.

SCREENSHOTS & VISUAL EVIDENCE

RESULT

The experiment successfully demonstrated the integration of AI-driven analytics using Zia in Zoho Creator for the **Hotel Room Booking Application**, proving its efficiency in delivering automated business intelligence, natural language reservation querying, and dynamic chart generation without manual script coding.
