7. Integrating Zoho Creator with Zoho CRM via Connections and APIs

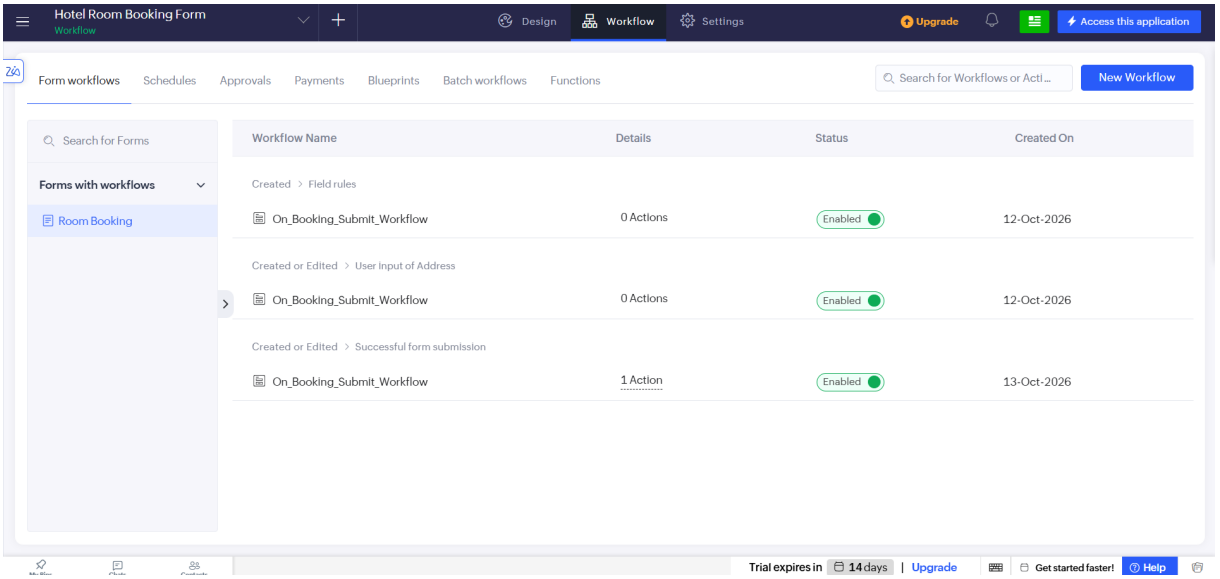

Aim: To design, develop, and integrate a custom Hotel Room Booking form in Zoho Creator with Zoho CRM using authenticated connections and automated workflow actions, enabling seamless guest lead generation and real-time reservation synchronization upon successful form submission.

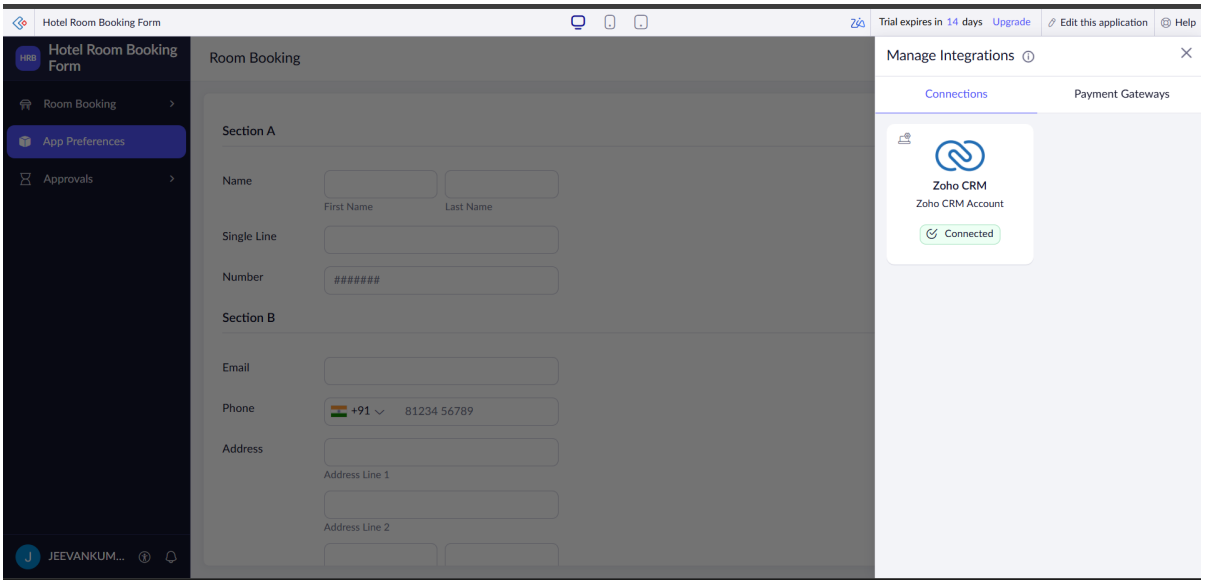

PROCEDURE

1. **Application Setup:** Log into the Zoho Creator platform and create a new application titled *Hotel Room Booking Application*.
2. **Form Design:** Construct the `Room_Booking_Form` incorporating Section-A (Personal details: Guest Name, Date of Birth, ID/Passport Number), Section-B (Contact details: Email, Phone, Address), and Section-C (Booking preferences: Room Type, Check-in Date, Check-out Date, Special Requests).
3. **Integration & Authentication:** Navigate to App Preferences > Manage Integrations. Select Zoho CRM and establish a secure OAuth connection. Verify that the connection badge displays *Connected*.
4. **Workflow Configuration:** Go to the Workflow tab, select the Room Booking Form, and create a new workflow under the trigger event `Created > Successful form submission`.
5. **Action Mapping:** Add an integration action inside the execution block to push guest booking data directly to Zoho CRM modules (Leads/Deals), then toggle the workflow status to *Enabled*.

SCREENSHOTS & VISUAL EVIDENCE

RESULT

The **Hotel Room Booking Application** was successfully created and integrated with **Zoho CRM**. Whenever a guest completes and submits the room reservation form in Zoho Creator, the workflow triggers automatically, executing the API push action to synchronize guest contact information, room choices, and stay dates into Zoho CRM in real time.
