**AIM**

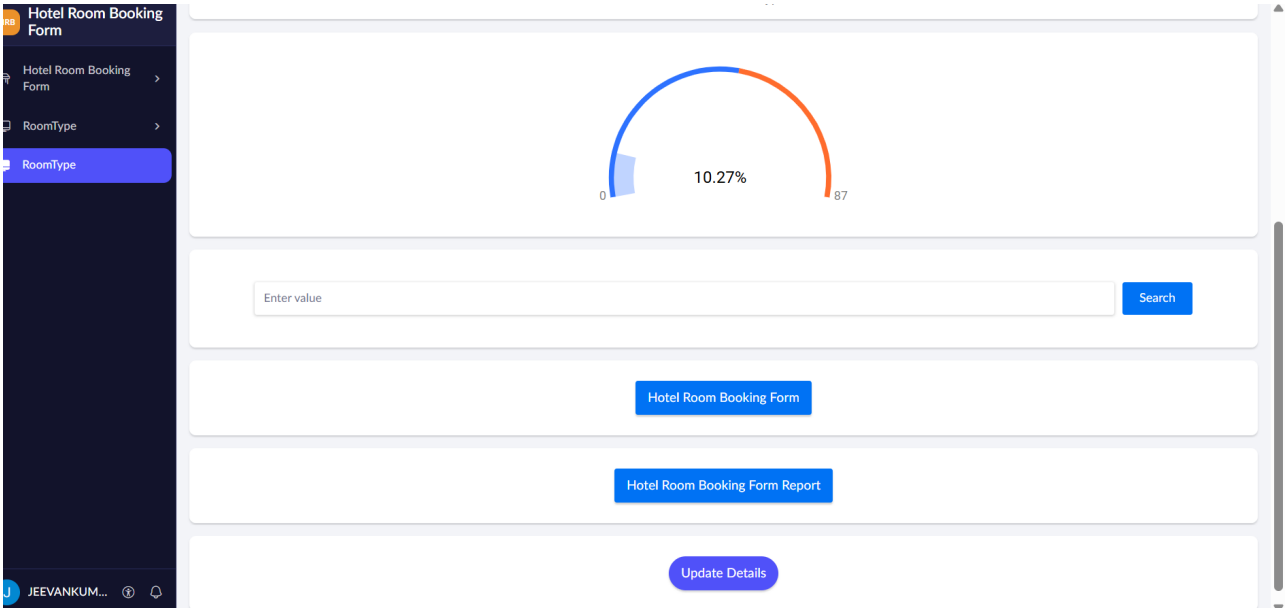

To design and build a Hotel Command Center Page in Zoho Creator using all eleven Page Builder elements to provide a unified workspace for monitoring, managing, and processing hotel bookings.

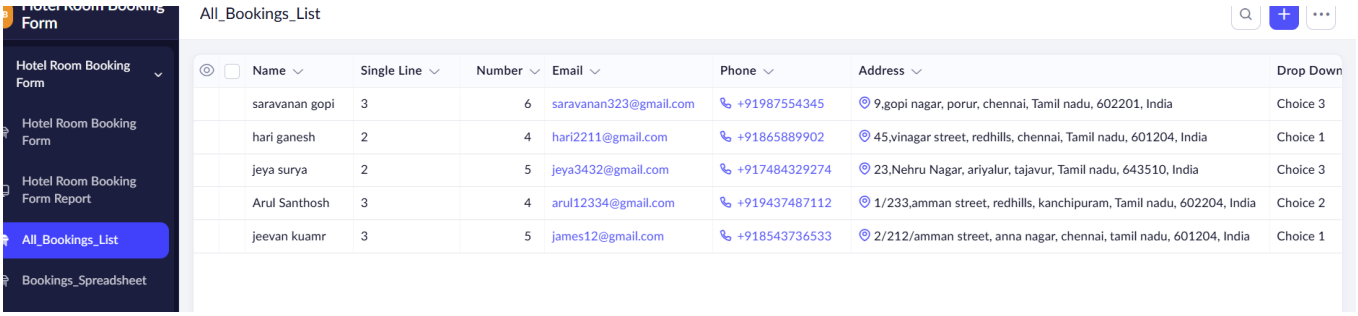

**PROCEDURE:**

1. Logged in to Zoho Creator and opened the Hotel Room Booking application.
2. Created a new page named Hotel_Command_Center_Page.
3. Added a Panel as the main layout container.
4. Added Gauge, Chart, and Search elements for occupancy monitoring, room-type analysis, and guest searching.
5. Added a Board to manage bookings across different status stages.
6. Added a Button for sending check-in reminders.
7. Embedded the Room_Booking_Form using the Form element.
8. Added the Room_Booking_Report using the Report element for detailed booking records.
9. Added Snippets, Widgets, and Viewer elements for hotel policies, housekeeping/arrival information, and guest ID documents.
10. Configured the required properties, access rules, and interactions for the elements.
11. Added sample booking data and tested the Gauge, Chart, Search, Board, and Viewer elements.
12. Saved the page and verified that all eleven elements functioned correctly.

## CONCLUSION

Thus, the Hotel Room Booking application was successfully configured with the required reports in Zoho Creator. The reports provide different views for analyzing and managing booking data, helping the hotel staff and management make effective operational and business decisions.
